

How to Use the QR Code Scanner

This guide demonstrates how to use the QR Code scanner feature built into the Android application to search for guides associated with QR codes on machines, products or locations.

Written By: Dozuki System

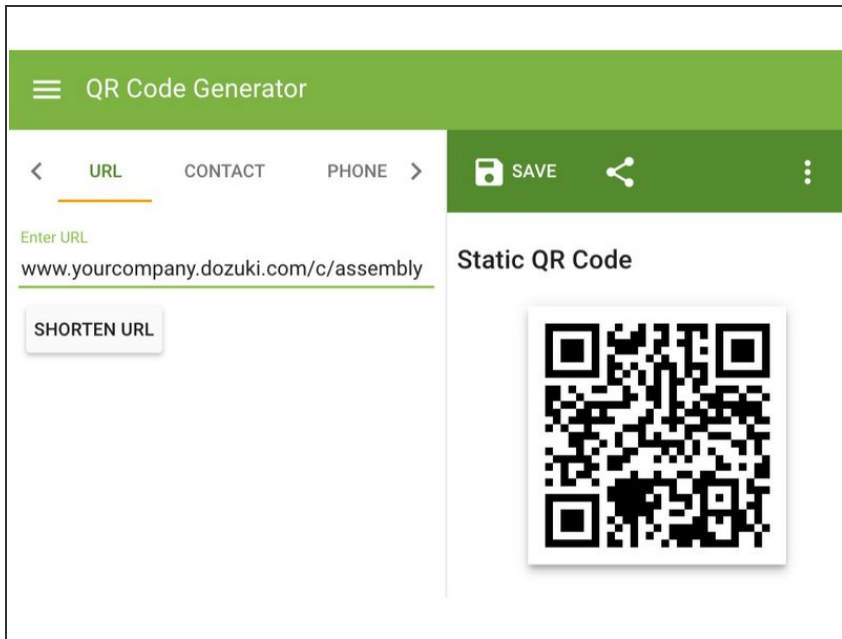

INTRODUCTION

This guide demonstrates how to use the QR Code scanner feature built into the Android application to search for guides associated with QR codes on machines, products or locations.

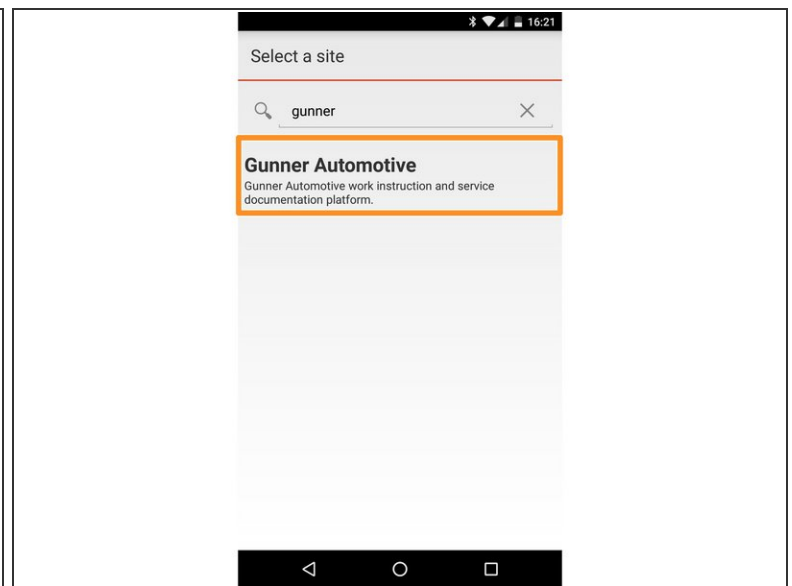

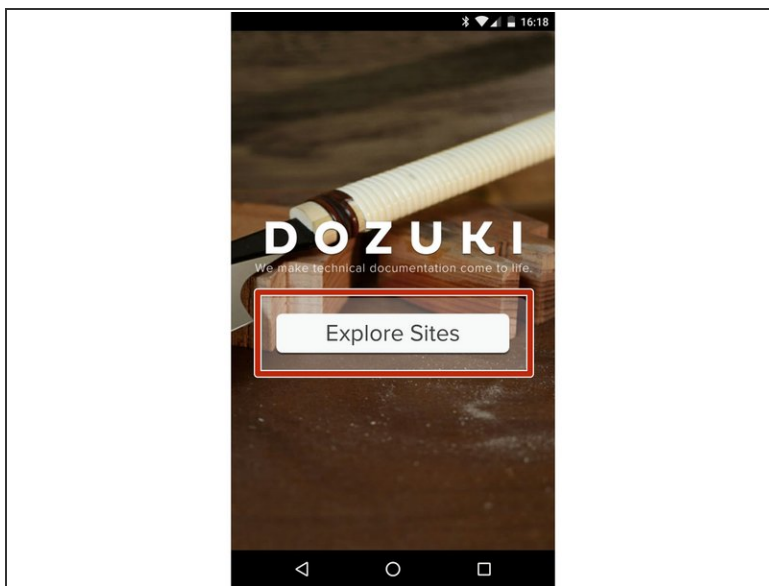

Looking to make it easier and faster for your users to access your guides? Now you can use the built-in QR Code Scanner in the Android Mobile app to find guides instantly!

Step 1 — Create QR Code Labels

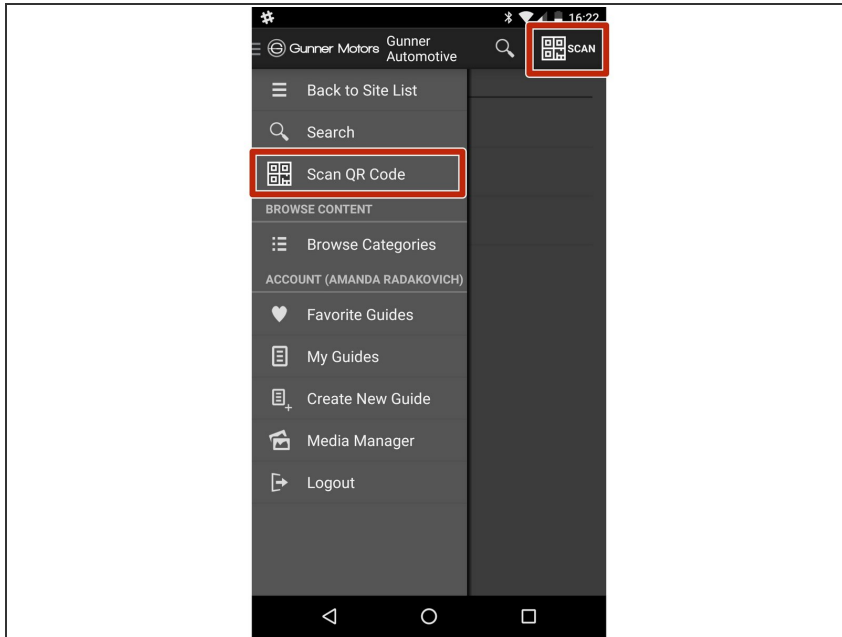

- Use one of the many free QR-Code Generators available online to create QR labels for your products, machines or locations.
- You can create different codes for different guide pages on your Dozuki site, then post them in the desired locations for users to scan.

Step 2 — Open the Android App

- Open the **Android app** on your phone and click **Explore Sites**.
- Select your **company** from the list to open your custom mobile app.

Step 3 — Open QR Code Scanner

- Select **Scan QR Code** from the app menu on the left or click the **QR Scan** icon on the top right.
- ⓘ If you do not see this option, [contact us](#) so we can activate the QR Code Scanner in your app.
- The QR scanner will open through the camera on your mobile device. Hold the device steady and place the red line on the screen directly over the QR Code.
- Once the code is scanned, the corresponding guide will appear in the app.
