

Overview of Upper Wall Module

This guide shows the sub-modules and how they come together.

Written By: Chris Reinhart

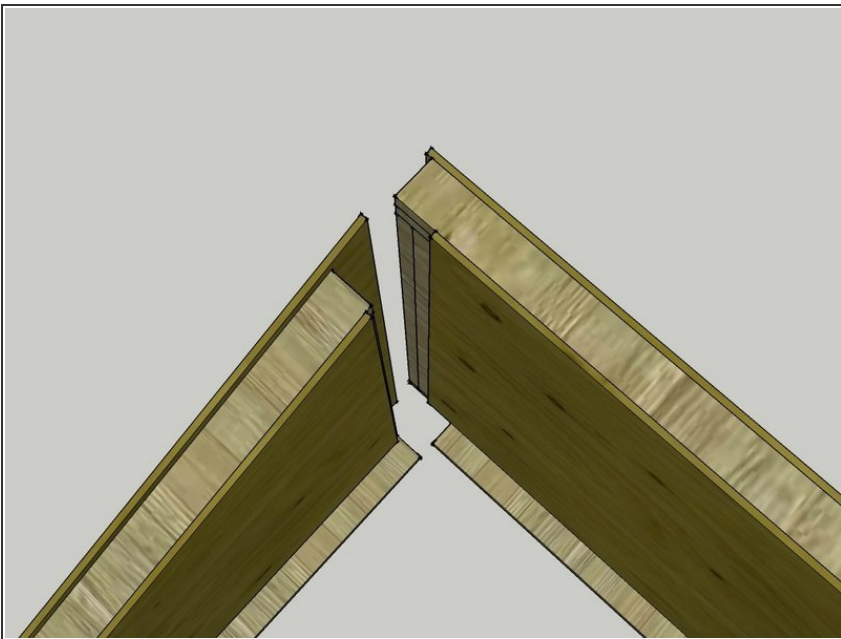

Step 1 — Overview of Upper Wall Module

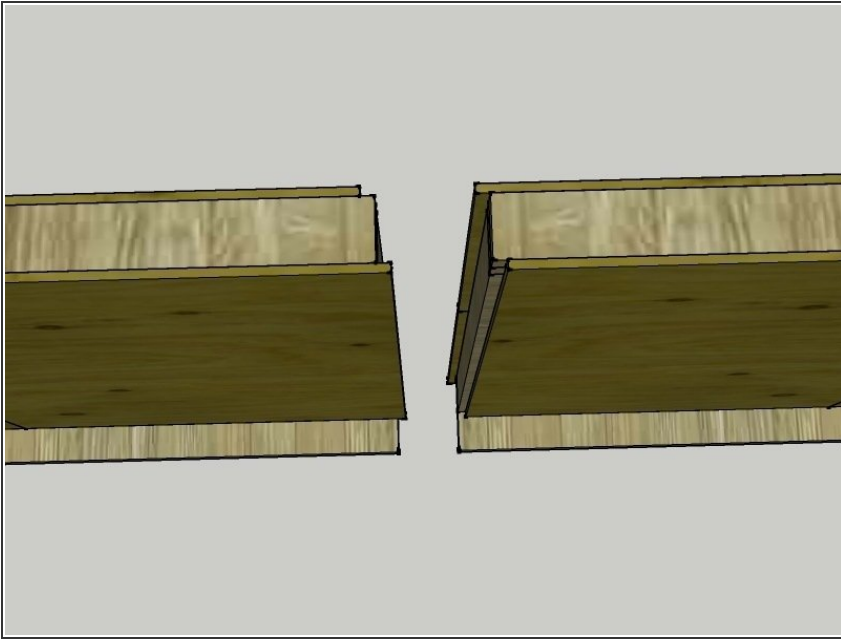

- This is what the four modules will look like when they come together.

Step 2

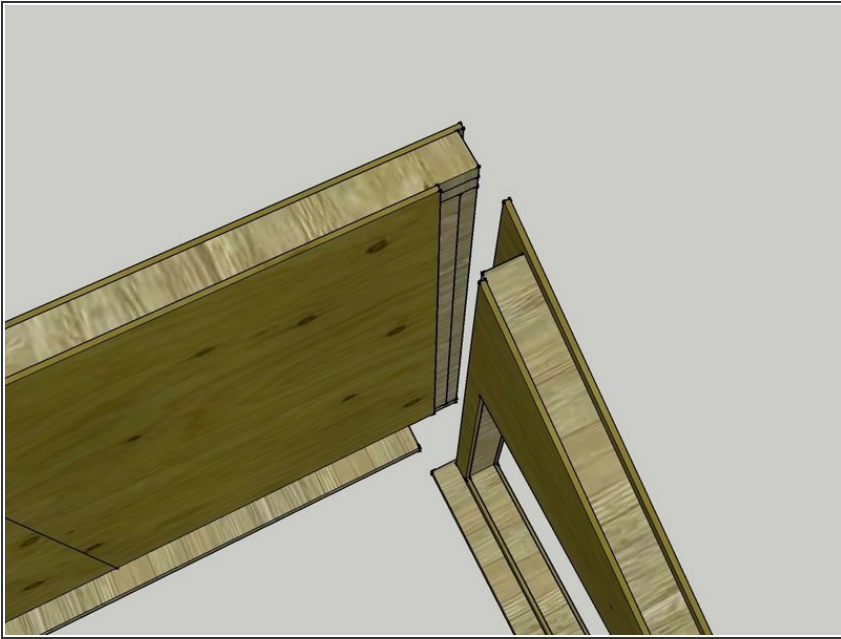

- The first image shows the north-west corner.
- You can see that the plywood on the west module extends past by several inches - this is how the corner is tied together.

Step 3

- This image shows how the two north modules come together. The plywood on the interior and exterior is made so that the two modules should slide together very easily.

Step 4

- This image shows the north-east corner. It is similar to the northwest corner - the plywood that extends on the east module is used to tie the two modules together.
